

An abstract graphic on the left side of the slide. It features a large purple semi-circle in the top left, a teal rectangle below it, a light blue circle to the right of the teal rectangle, an orange semi-circle in the bottom left, and a yellow semi-circle to the right of the orange one.

UX Day 2

Intro to UX & UI

Review your assignments in groups.

Take a few minutes to review last weeks competitive analysis assignments together.

What are UI & UX Design?

User Experience (UX) Design focuses on how the product functions and the logic behind it.

User Interface (UI) Design focuses on the aesthetics, visual layout, and how the product physically looks and feels.

UI Design

UI refers to the visual and interactive elements users engage with. In both physical and digital products, it's the design, shape, buttons, and interactions that users directly interact with. UI is about creating a clear, effective way for users to perform tasks.

Example

Consider a simple on/off switch or an iPhone interface. The on/off switch has a straightforward design: flip it up to turn a device on, and down to turn it off. Similarly, an iPhone's interface includes app icons, touch gestures, and buttons designed for intuitive interaction. In both cases, the UI is designed to be easily understood and navigable, allowing users to complete their tasks with minimal friction.

UX Design

UX is broader. It encompasses the entire experience a user has while interacting with a product or system. It considers factors like ease of use, efficiency, emotional satisfaction, and how effectively a product solves a user's problem.

Example

Imagine two users holding identical iPhones. While the design and layout (UI) of the iPhone remain the same, one user might feel confused or frustrated due to poor app performance or difficulty navigating the system, leading to a negative experience. On the other hand, the second user might be satisfied and happy with how efficiently the iPhone meets their needs, providing a smooth and seamless experience.

What do UX designers do?

We use design thinking to solve problems. In software development, the end product is usually an interface, but this process is used to create both experiences and physical products.

So why does UX matter?

In the physical world it could be the difference between a pleasant or frustrating push/pull door experience.

In development, good UX can ultimately save significant amounts of time and money in re-work, and create a more streamlined and usable product.

UX Flows

A user flow is a set of interactions that describe the typical set of steps needed to accomplish a common task in a product.

These goals can be completed quickly with limited interactions.

Examples

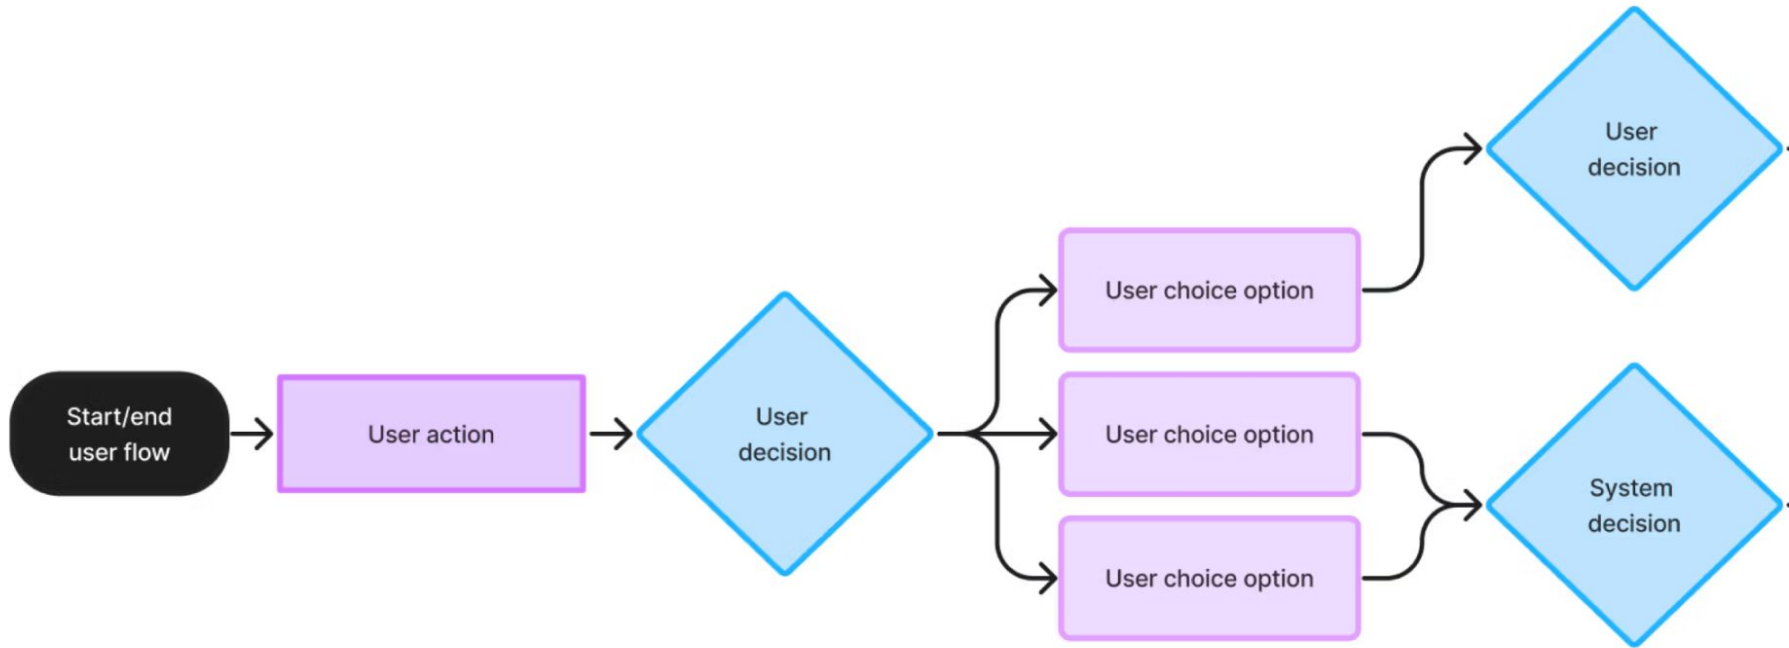

Purchasing a tennis racket on a sporting goods site

Signing up for email updates on a credit-score-monitoring application

Updating a profile picture on a company's intranet

Wireframing

Wireframing is a way to design a website or app at the structural level. A wireframe is commonly used to layout content and functionality on a page which takes into account user needs and user journeys.

Wireframes are used early in the development process to establish the basic structure and functionality of a page before visual design and content is added.

Resources

USER FLOWS

- **90 Second User Flow**
 - <https://www.youtube.com/watch?v=Zt2GmDOEHM0>
- **What is a User Flow?**
 - <https://youtu.be/PTrbSSMhsqE?si=VP-m2lzIPRBuQ8kv>
- **User Flows 101 (Disclaimer: The BEST video, but easily the most boring)**
 - https://youtu.be/fhhEwu9SqtI?si=IWxe_CSqbQ026Mzj

WIREFRAMES

- **What is a wireframe?**
 - <https://youtu.be/CskJV6pBthM?si=uhF4SayCJMIWYear>
- **Creating Low Fidelity Wireframes in Figma**
 - <https://youtu.be/vplB-w--sao?si=KbhtVFAhQXARBSY2>

Assignment 2

User Flows and Wireframes in Figma

Purpose

Reinforce UX workflow: from flow to wireframe

Practice low-fidelity interface design

Translate hand-drawn work into digital form

VERY IMPORTANT!

Review for next Class:

- **10 Usability Heuristics for User Interface Design**
 - <https://www.nngroup.com/articles/ten-usability-heuristics/>
- **The Gestalt Principles**
 - https://ixdf.org/literature/topics/gestalt-principles?srsId=AfmBOohbb3A-LP6xI2UDSYaCzI_Lp4OckBWMrp0vpa2q9Vmj9_KIFQ1

Next Class Agenda

01. Discuss Usability Heuristics

**02. Review COMPLETED Wireframes
and user flows in groups**

03. Workshop the next assignment
